

“We are proud to have been 2nd generation IT pioneers”.

NLATIMES

Innovation

At NLA Systems, we have always been thinking outside the box.

During the past 23 years we have introduced many innovative features in our software. Whether little improvements or a completely new way of doing things, these features have been copied by our competitors time and time again.

Established in February 1988, NLA Systems Ltd. is a computer company specializing in Information Technology. We carry more than two decades of experience in providing IT solutions for successful businesses. Innovators of low cost off the shelf or customized Accounting systems, NLA Systems Ltd. provides a comprehensive service.

Our business strategy is one which makes us an exclusive solutions provider. We have never commercialized ourselves to the extent of ending up with a huge client base at the risk of lowering the

quality of our sterling service. Instead, we have always strived to keep our moderate client base of good quality clients happy. This has built and maintained our excellent reputation throughout the years. We have broken all established academic laws of business and administration and yet we have managed to build and maintain a substantial list of prestigious clients along the years. This has been due to a focus on a high quality product, a disregard to short term profits, and an honest service intended to strengthen our long term relationship with our clients.

No Software Licenses

The fact that we have chosen and embraced opensource development tools and platforms means that we have freed our clients from expensive software licenses. Our software is written in the Java language and makes use of the MySQL database.

Multi-Platform

Our choice of the Java language and MySQL database also means that our clients are free to choose their platform, whether it is any version of Windows, Linux or Mac.

PYRAMID payroll

is a powerful, yet flexible package, which has been reliably operating for over two decades at hundreds of companies large and small. One common remark that we kept hearing from our clients regarded its ease of use.

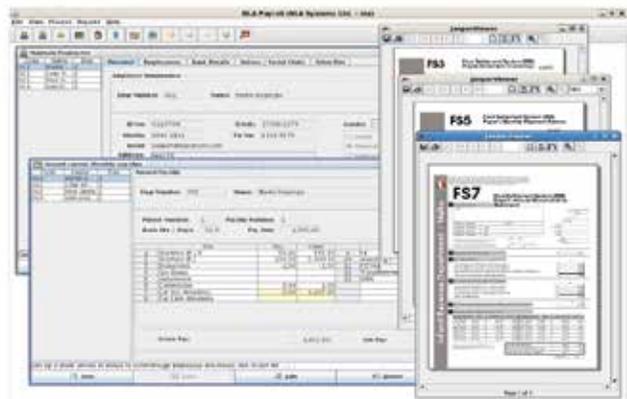

sound, it was a realistic aim since we have the experience, carefully listened to 23 years of client feedback and we wrote a completely new package using completely new development tools.

We recently decided that it was time to develop a brand new system. Our idea was to design a fresh system that preserved what has worked well for years, but to add all the new features that we dreamed of, using the very latest technology. It was our goal to achieve the best payroll software on the Island. As bombastic as this may

ATTENTION ALL Payroll and Personell Departments NEW PAYROLL ON THE MARKET

The Payroll Bureaus

Pyramid payroll is used by quite a few payroll bureaus.

A feature which is particularly useful for this type of client enables the user to broadcast common data such as tax bands and NI rates to all companies. This results in tremendous time savings and error avoidance.

We also offer special prices for each extra company added in bureaus.

Main Features:

- User-defined leave-types
- User-defined payslip fields through spreadsheet-type formulas
- FSS reports are identical to those of the IRD
- All reports exported to PDF, Rich-Text, Excel, HTML, ODT and others
- Payslips and all other reports can be dispatched in PDF via email.
- User-defined reports/graphs/charts (open source report writer)
- Enhanced database structure
- Enhanced data security and data integrity
- Multi-platform - Runs on Windows, Linux and Mac
- Active calendar on desktop
- Comparative graphical data on desktop
- No end-of-year process

Frequently Asked Questions

Q: Can I still post payslip amendments using only one hand on the numeric keypad?

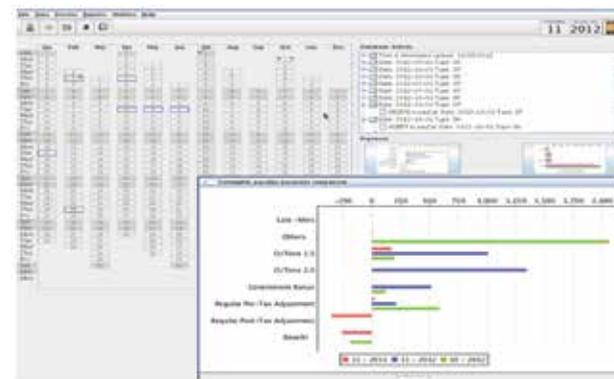

A: While we have obviously included mouse functionality in the the new payslip amendments module, we have preserved the old faithful and loved keystrokes.

Q: Can I send out payslips via email straight from the new payroll?

A: Yes. By using our cyberPOST2™ software, you can, with one click, email payslips to all your employees, on-the-fly. Each payslip is emailed as a PDF attachment. See overleaf.

SETTING THE TREND...

The payroll desktop sports an active calendar and a comparative graphical picture of the payroll data. Abnormal figures can be spotted at a glance.

cyberPOST2 is a digital document distribution application that allows the user to design his or her own document templates using a report writer or simply using text or HTML. Through these user-defined templates cyberPOST2 can then dynamically generate personalized documents containing merged data from any relational database and subsequently emails or faxes them to their respective recipients. Documents can be delivered in various formats including HTML, PDF and plain text, either contained in the email body or as an attachment.

Goodbye to End-of-Year process

One of the innovative features we introduced in our new payroll system is the removal of the end-of year process.

Gone are the days of creating archives, printing all this year's reports and issuing all the necessary government reports before generating the new year's first payroll.

Everything flows naturally and continuously like life itself.
